

INTRODUCING THE...

FOIL CUTTING TOOL

AVAILABLE FOR TRUMPF OR TURRET STYLE MACHINES

Use the Foil Cutting Tool to accurately score plastic coating used to protect material from being scratched.

The plastic can easily be peeled off to allow forming operations, logos etc to be added whilst leaving the majority of the sheet protected and not marking the sheet in any way.

Benefits/Specifications:

- Very little tool wear using the Wilson Wheel Technology
- Spring loaded to compensate for fluctuations in sheet thickness
- Adjustable spring rate meaning the exact amount of pressure can be applied to score to minimise sheet marking
- Can run at a maximum of your machine speed
- Underside of sheet rolls on a wheel rather than being dragged across a blank die
- Minimum radius depends on the machine used
