

WILSON 2·4·1™

SLITTING DIE

This is a special 2-4-1 die holder assembly, which provides you with the ideal solution for slitting applications.

The die blade holder provides shock resistant support to the 2-4-1 die blade, prolonging tool life.

The complete assembly consists of a shim pack, a specially reinforced die holder and a knockout tool. The die blade is purchased separately.

The blade is made from Ultima™, a special powdered tool steel. In addition to the 2-4-1 system itself giving you twice the regrind life over that of a standard die, Ultima™ can further extend the tool life by 100% compared with a standard die. When you finally run out of regrind life, simply order a new die insert and you're ready to punch again.
